Trader Update 2026-06:

MEMO 2.0, MEMOIR 2.0 and 23×5 UAT Availability

24X National Exchange ("24X") is pleased to announce that MEMO 2.0 and MEMOIR 2.0 are now available in the 24X UAT environment, known as XDE, for Member testing.

23×5 UAT Testing

XDE is now operating on a 23×5 schedule. Members may connect after 9:00 p.m. ET and submit orders through 8:00 p.m. ET the following trading day. XDE will observe a daily pause from 8:00 p.m. to 9:00 p.m. ET.

During the initial phase of overnight testing:

- Normal SIP driven market data will not yet be available
- LULD price bands and complete overnight reference data will not yet be available
- Members may establish test markets by entering compatible buy and sell orders into XDE

Protocol Upgrade Requirements

Members do not need to upgrade to MEMO 2.0 or MEMOIR 2.0 to participate in the overnight trading session. Existing supported MEMO sessions and MEMOIR feeds may continue to be used.

An upgrade is only necessary for Members that want to use the additional fields and functionality available in the 2.0 protocols. Current and 2.0 versions will operate in parallel during the migration period.

MEMOIR 2.0 IP Addresses and Ports

The new UAT and production multicast, replay, and snapshot IP addresses and ports are provided on the [24X website](#).

Members should use the rows marked New for the MEMOIR 2.0 feeds and confirm that network and firewall configurations permit access before testing.

Member Action

Members should review the MEMO 2.0 and MEMOIR 2.0 specifications, confirm connectivity to the new addresses, and begin overnight testing in XDE. Members requiring a new MEMO 2.0 order entry session should contact 24X Market Operations.
